

EXCEL

(sanjay chauhan)

Common functions:

1. AVERAGE

```
=AVERAGE (A1:A10)
```

Calculates the average of a range of numbers

2. CHOOSE

```
=CHOOSE (2, A1, C3, E9)
```

Returns a value from a list based on an index number.

3. DATE

```
=DATE (2023, 12, 25)
```

Creates a date with the specified year, month, and day.

4. DAYS

```
=DAYS ("2023-12-25", "2023-01-01")
```

Returns the number of days between two dates.

5. FIND

```
=FIND ("M", "Microsoft")
```

Finds the starting position of one text string within another.

6. IF

```
=IF (A1>10, "Yes", "No")
```

Returns one value if a condition is true, another if false.

7. INDEX

```
=INDEX (A1:C10, 2, 3)
```

Returns the value of a cell in a specified row and column.

8. MATCH

```
=MATCH(100, A1:A10, 0)
```

Searches for a value in a range and returns its position.

9. SUM

```
=SUM(A1:A10)
```

Adds all numbers in a range.

10. VLOOKUP

```
=VLOOKUP(B1, A1:C10, 2, FALSE)
```

Looks up a value in a table and returns a corresponding value.

11. DAY

```
=DAY("2023-12-25")
```

Extracts the day from a date.

12. DAYS

```
=DAYS("2023-12-25", "2023-01-01")
```

Returns the number of days between two dates.

13. NOW

```
=NOW()
```

Returns the serial number of the current date and time.

14. ISNUMBER

```
=ISNUMBER(A1)
```

Checks if a value is a number.

15. ISERROR

```
=ISERROR(A1)
```

Checks if a value is an error.

16. ISERR

```
=ISERR(A1)
```

Checks if a value is any error value except #N/A.

17. **ISBLANK**

```
=ISBLANK(A1)
```

Checks if a cell is empty.

18. **AND**

```
=AND(A1>1, A1<100)
```

Returns TRUE if all arguments are TRUE.

19. **IF**

```
=IF(A1>10, "Yes", "No")
```

Returns one value if a condition is true, another if false.

20. **IFERROR**

```
=IFERROR(A1/B1, "Error")
```

Returns a value if an error is found, otherwise returns the result of the formula.

21. **IFNA**

```
=IFNA(A1/B1, "N/A")
```

Returns a value if the formula results in #N/A, otherwise returns the result of the formula.

22. **OR**

```
=OR(A1>1, A1<100)
```

Returns TRUE if any argument is TRUE.

23. **CHOOSE**

```
=CHOOSE(2, A1, C3, E9)
```

Returns a value from a list based on an index number.

24. **INDEX**

```
=INDEX(A1:C10, 2, 3)
```

Returns the value of a cell in a specified row and column.

25. **MATCH**

```
=MATCH(100, A1:A10, 0)
```

Searches for a value in a range and returns its position.

26. **UNIQUE**

```
=UNIQUE(A1:A10)
```

Returns a list of unique values in a list or range.

27. **VLOOKUP**

```
=VLOOKUP(B1, A1:C10, 2, FALSE)
```

Looks up a value in a table and returns a corresponding value.

28. **XLOOKUP**

```
=XLOOKUP(B1, A1:A10, C1:C10)
```

Searches a range or an array, and returns an item corresponding to the first match it finds.

29. **CONCATENATE**

```
=CONCATENATE(A1, " ", B1)
```

Joins several text items into one text item.

30. **FIND**

```
=FIND("M", "Microsoft")
```

Finds one text value within another (case-sensitive).

31. **LEFT**

```
=LEFT(A1, 3)
```

Returns the first character or characters in a text string, based on the number of characters you specify.

32. **LEN**

```
=LEN(A1)
```

Returns the number of characters in a text string.

33. **LOWER**

```
=LOWER(A1)
```

Converts text to lowercase.

34. MID

```
=MID(A1, 2, 3)
```

Returns a specific number of characters from a text string, starting at the position you specify.

35. NUMBERVALUE

```
=NUMBERVALUE("1,000.00")
```

Converts text to number in a locale-independent manner.

36. PROPER

```
=PROPER(A1)
```

Capitalizes the first letter in each word of a text value.

37. REPLACE

```
=REPLACE(A1, 1, 3, "New")
```

Replaces part of a text string with a different text string.

38. REPT

```
=REPT(A1, 3)
```

Repeats text a given number of times.

39. SEARCH

```
=SEARCH("m", "Microsoft")
```

Finds one text value within another (not case-sensitive).

40. UPPER

```
=UPPER(A1)
```

Converts text to uppercase.

41. TRIM

```
=TRIM(A1)
```

Removes spaces from text except for single spaces between words.

42. EXACT

```
=EXACT(A1, B1)
```

Checks if two text strings are exactly the same.

43. **COUNTA**

```
=COUNTA (A1:A10)
```

Counts the number of nonblank cells.

44. **COUNTBLANK**

```
=COUNTBLANK (A1:A10)
```

Counts the number of blank cells.

45. **LARGE**

```
=LARGE (A1:A10, 1)
```

Returns the k-th largest value in a data set.

46. **MAX**

```
=MAX (A1:A10)
```

Returns the maximum value in a range of numbers.

47. **MEDIAN**

```
=MEDIAN (A1:A10)
```

Returns the median of a range of numbers.

48. **MIN**

```
=MIN (A1:A10)
```

Returns the minimum value in a range of numbers.

49. **MODE**

```
=MODE (A1:A10)
```

Returns the most frequently occurring value in a range of numbers.

50. **PERCENTILE**

```
=PERCENTILE (A1:A10, 0.5)
```

Returns the k-th percentile of values in a range.

51. **QUARTILE**

```
=QUARTILE (A1:A10, 1)
```

Returns the quartile of a data set.

52. **RANK**

```
=RANK (A1, A1:A10)
```

Returns the rank of a number in a list of numbers.

53. **SMALL**

```
=SMALL (A1:A10, 1)
```

Returns the k-th smallest value in a data set.

54. **STDEV**

```
=STDEV (A1:A10)
```

Estimates standard deviation based on a sample.

55. **STDEVP**

```
=STDEVP (A1:A10)
```

Calculates standard deviation based on the entire population.

56. **VAR**

```
=VAR (A1:A10)
```

Estimates variance based on a sample.

57. **VARP**

```
=VARP (A1:A10)
```

Calculates variance based on the entire population.

58. **What is the difference between a workbook and a worksheet?**

A workbook is an Excel file containing multiple worksheets, while a worksheet is a single spreadsheet within a workbook.

59. **How do you apply a filter in Excel?**

Use the **Filter** option in the **Data** tab to filter rows based on specific criteria.

60. How can you remove duplicate values in Excel?

Select the range, go to **Data** → **Remove Duplicates**, and choose the columns to check for duplicates.

61. What is conditional formatting in Excel?

A feature that allows you to format cells based on specific conditions (e.g., highlight cells greater than a value).

62. What are cell references in Excel?

Relative (A1), Absolute (\$A\$1), Mixed (A\$1 or \$A1).

63. What is the difference between COUNT() and COUNTA()?

COUNT() counts numeric values, while **COUNTA()** counts all non-empty cells.

64. What is the VLOOKUP function?

Searches for a value in the first column of a range and returns a value in the same row from another column.

65. How does the IF() function work?

Performs a logical test and returns different values based on whether the condition is true or false.

66. What is the purpose of the MATCH() function?

Returns the relative position of a value in a range.

67. What is the INDEX() function?

Returns the value of a cell at a specified row and column in a range.

68. What is a macro in Excel?

A macro is a recorded sequence of steps or VBA code used to automate repetitive tasks.

69. What is the use of the SUBSTITUTE() function?

Replaces occurrences of a specified text in a string.
